Autonomous Vehicle.
Computer vision
→ uses cameras
→ captures images
& understands environment.
Image acquisition
→ camera
→ captures and images
→ converts to digital image.
Image processing
→ sampling.
→ quantization
→ enhancement.
→ object detection.
objects Recognized
→ pedestrains.
→ bicycles.
→ traffic signs
→ obstacles.
→ roads.
Features
→ Fast detection.
→ accurate recognition
→ real-time processing
→ supports navigation.
Application
→ lane detection
→ traffic sign detection
→ parking
→ collision avoidance

2)

X-Ray System
→ X-ray source .
→ patient .
→ digital detectors .
Digital Image .
→ pixels
→ resolution .
→ brightness .
→ contrast .
Image Acquisition
→ capture x-ray
→ convert to digital image .
→ store image .
Computer vision levels-
low - enhancement .
mid - feature detection
high - abnormality recognition .
Image processing
→ enhancement .
→ noise removal
→ segmentation
→ feature extraction .
Applications.
→ bone fracture detection
→ tumore detection .
→ lung problems .
→ disease diagnosis .
